

PLANNING FOR YOUR FUTURE

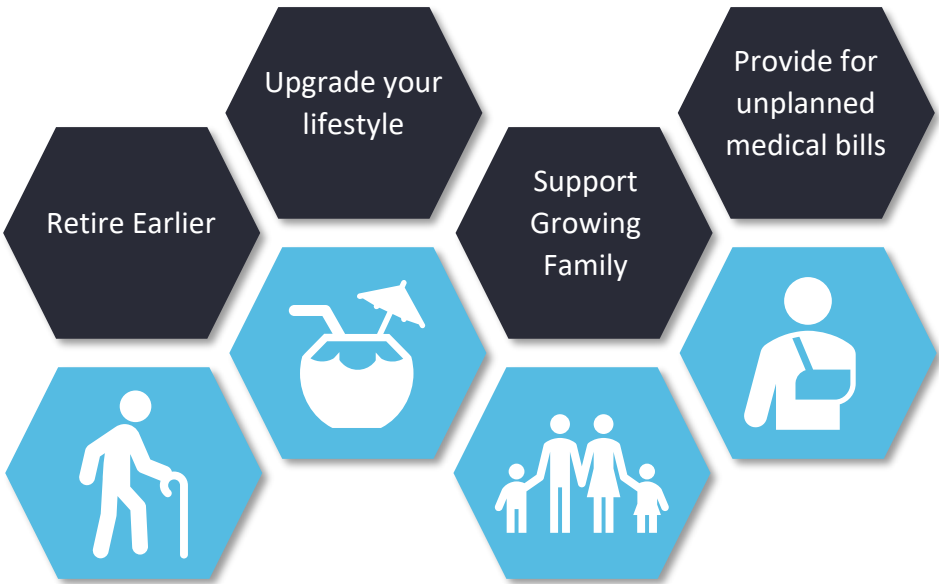

Investing is an important step in securing your financial future. Investing now can maximise your wealth and prosperity

Table 1 – Example of how investing earlier may have greater benefit long term

Age	20	30	40
Monthly Investment	\$500	\$500	\$500
Yearly Investment	\$6,000	\$6,000	\$6,000
Years until 65	45	35	25
Savings	\$270,000	\$210,000	\$150,000

For example, as shown in Table 1, an individual that saves \$500 per month every month from the age of 20 to the age of 65 would have saved \$270,000. Whereas an individual that starts saving the same amount from the age of 30 would only have \$210,000. This is a simple example that does account for any macroeconomic factors such as inflation.

Investing may enable us to be in a position where we can:

The graphic above shows a few examples where investing can be a benefit, but there are many others such as saving for a rainy day, buying a home, starting a business etc.

Knowing where to start an investment journey can be tricky, there are some key points that investors should know before starting their financial journey:

Understanding the various aspects of investing is challenging and knowing who you can talk to or get advice from can also be tricky

Understanding the varying forms of asset classes used in investing, from equities/stocks, fixed income instruments, venture capital and property

You can also have your investments looked after professionally by investment managers who can take care of your money for you

The common idea is that you need a lot of money to start investing, but that's not the case anymore

Luckily, it's easier than you think to begin your investment journey and securing your financial future with Briix: “Building wealth, Briick by Briick”

a **Briix** Group company
